Swarupa Saha

+91-8240053356 | swarupasaha78@gmail.com | Kolkata, India | X | GitHub | LinkedIn

Full Stack Engineer

Software Engineer specializing in Full-Stack, AI, and Blockchain development. Experienced in building scalable web applications, intelligent systems, smart contracts, and developer tooling with a strong focus on system design, product thinking, and user experience. Passionate about solving complex engineering challenges and building reliable software at scale.

Skills

- Smart Contract Development
- Solidity, Rust, Typescript, Anchor
- Zero Knowledge Proofs
- DeFi Infrastructure
- React Js, Next Js
- Tailwindcss
- API Design and integration
- SQL, MongoDB, Postgres
- Git & CI/CD
- Docker
- Linux Administrations
- Drizzle, Prisma
- Hackathons & Workshops
- Vercel
- Leadership, Teamwork
- Project Management
- Collaboration
- Public Speaking, Event Coordination

Experience

Stellar India Ambassador
Jun 2026 – Present

Stellar Development Foundation

- Represent the Stellar ecosystem by driving developer adoption, ecosystem growth, and technical advocacy.
- Build and showcase production-grade applications, smart contracts, and developer tooling on Stellar and Soroban.
- Lead hackathons, workshops, and technical initiatives while mentoring developers and fostering a high-impact builder community.

Junior Researcher
Sep 2024 – Present

Institution's Innovation Council (IIC), IEM

- Architect and build production-ready software across AI, blockchain, and full-stack systems, translating research into scalable products.
- Collaborate cross-functionally with engineers, designers, and stakeholders to drive technical design, implementation, and product delivery.
- Lead rapid prototyping, technical documentation, and solution architecture while evaluating emerging technologies to solve real-world engineering challenges.

Projects

NOVAIRE
Link

Fixed-Income DeFi Protocol

Novaire is an intent-based fixed-yield protocol built on Stellar that enables users to earn predictable returns without navigating complex DeFi mechanics. By leveraging Principal Tokens (PT), Yield Tokens (YT), automated strategies, and autonomous rollovers, Novaire transforms sophisticated yield management into a simple, one-click investment experience.

DOODLE
Link

Decentralised Freelancing Platform

DOODLE is where ambitious businesses meet exceptional talent. Built with secure milestone-based escrow, instant global payouts, and transparent on-chain reputation, our platform transforms freelance hiring into a faster, safer, and more reliable experience so you can focus on building, not chasing payments or resolving disputes.

CREDENCE
Link

Decentralized Lending Protocol

Credence is a production-ready decentralized lending protocol built on Stellar Soroban that enables users to securely supply assets, borrow against collateral, repay loans, and monitor portfolio health through real-time on-chain interactions. Credence delivers a secure, transparent, and seamless DeFi lending experience.

Contribution and Research Work

- Built full-stack and Web3 applications using modern web and blockchain technologies.
- Researched DeFi protocols, smart contracts, and blockchain architectures.
- Contributed to collaborative projects using Git, GitHub, and agile workflows.
- Explored AI, blockchain, and emerging technologies through research and hackathons.
- Developed Kesariya, an AI-powered smart agriculture solution for saffron cultivation.

Achievements

- **MLH × Solana Track Winner & 3rd Overall, Hexafalls Season 2 (2026):** Built an award-winning Web3 application.
- **Winner, Axiora Robotics Track (2026):** Developed a robotics solution leveraging Zero-Knowledge (ZK) technology.
- **Winner, GeeksforGeeks Classroom Hacks (2026):** Built a scalable software solution.
- **Finalist, IDE Bootcamp (2025):** Built and pitched an innovative technology startup.
